

# NPSHA (positive suction press.)

$$\text{NPSHA} = \frac{10}{\gamma} \cdot P_s - \frac{10}{\gamma} \cdot P_{vp} + h_a - h_L$$

1 MPa = 10.1972 kg/cm<sup>2</sup>

**Ps**: Surface press. (kg/cm<sup>2</sup>a.)

**Pvp**: Saturated vapor press. (kg/cm<sup>2</sup>a.)

**ha**: Height (m)

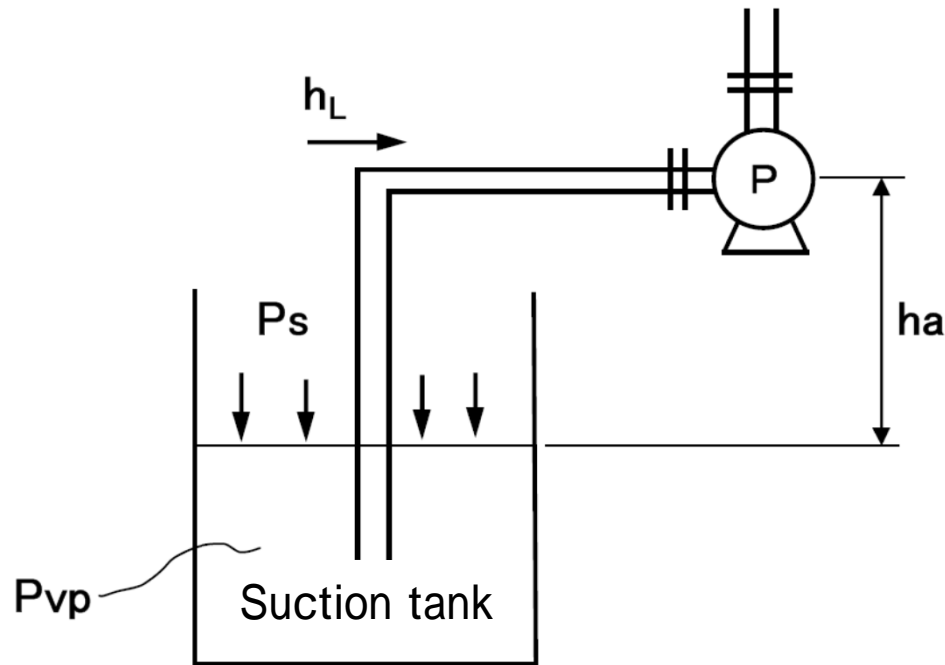

**hL**: Press.loss (m)

**γ**: Density (g/cm<sup>3</sup>)

# NPSHA (negative suction press.)

$$\text{NPSHA} = \frac{10}{\gamma} \cdot P_s - \frac{10}{\gamma} \cdot P_{vp} - h_a - h_L$$

1 MPa = 10.1972 kg/cm<sup>2</sup>

$P_s$ : Surface press. (kg/cm<sup>2</sup>a.)

$P_{vp}$ : Saturated vapor press. (kg/cm<sup>2</sup>a.)

$h_a$ : Height (m)

$h_L$ : Press.loss (m)

$\gamma$ : Density (g/cm<sup>3</sup>)

# NPSHA (closed suction tank)

$$\text{NPSHA} = \frac{10}{\gamma} \cdot P_s - \frac{10}{\gamma} \cdot P_{vp} + h_a - h_L = h_a - h_L \quad 1 \text{ MPa} = 10.1972 \text{ kg/cm}^2$$

$P_s$ : Surface press. (kg/cm<sup>2</sup>a.)

$P_{vp}$ : Saturated vapor press. (kg/cm<sup>2</sup>a.)

$h_a$ : Height (m)

$h_L$ : Press.loss (m)

$\gamma$ : Density (g/cm<sup>3</sup>)
